Negentropy Decision Hygiene and Context Monotonicity Framework

9 sources

The **Negentropy Avionics Stack** is a sophisticated control architecture designed for high-consequence systems that prioritises **stability**, **operational discipline**, and the reduction of systemic disorder. It is structured around the **"42" philosophy**, which argues that long-term persistence for any intelligence requires **benevolence** and cooperation to prevent the hidden costs of entropy. The framework is composed of several modules, including **QNF** for decision governance, **OI** for filtering information quality, and **ARM** for protecting the human operator from burnout. Other critical layers like **SGM** and **CAIM** ensure that system updates and semantic meanings remain consistent and safe over time. Through specific tools like the **Crisis Card** and **Energy Ledger**, the stack forces explicit trade-offs and limits when resources or human capacities are
